

# Video Conferencing Terms

Information technology jargon and acronyms may precipitate confusion and misunderstanding. Listed below is general information for each type of video conferencing elements that the University of La Verne supports.

## WebEx

- Developed to provide on-demand collaboration, online meetings, web conferencing and videoconferencing applications.
- Face to face experience between two or more participants at different sites by using computer networks to transmit audio and video data.

## Telepresence

- Developed to link two physically separated rooms so they resemble a single conference room regardless of location.
- Face to face experience through life-like video, audio, and content sharing using immersive desktop or mobile systems.

## WebEx & Telepresence

- Developed in 2013 for broader reach, increased productivity, and enhance a return on the product investment.
- Face to face experience through life-like video, audio, and content sharing, with video conferencing applications.
